Checklist of Things to Notice

Notice the following about the data on the right:

There are 3 types of clothing.

The size values are S = small and L = large.

The item column has item numbers.

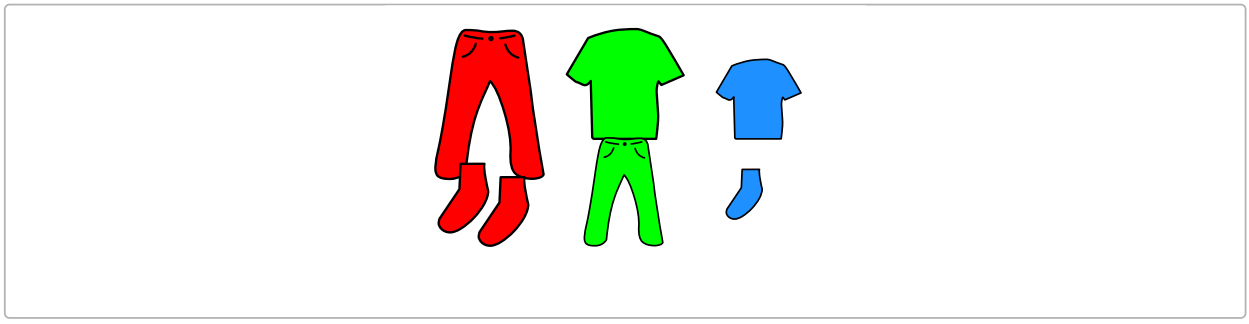
In total, there are 7 items of clothing.

2

Organize by Color

Let's go to the **edit pivotedit pivot** tab to organize this clothing by color.

Drag the **color** field to the **column** drop zone, then click the submit button.

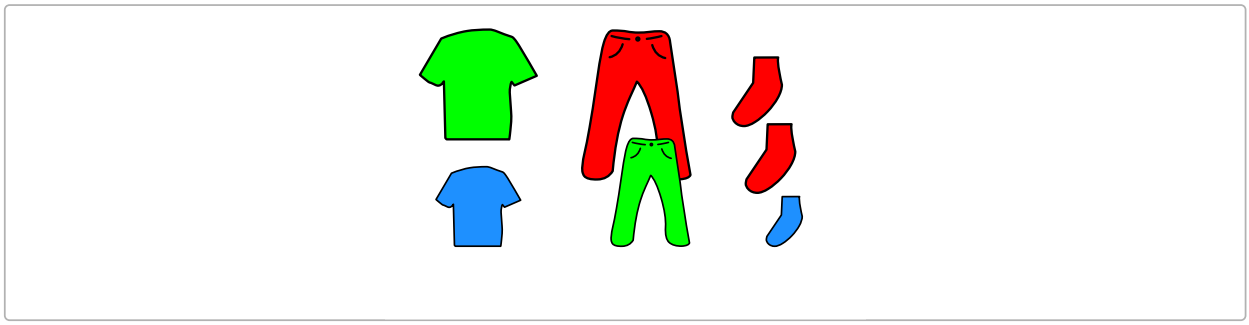


Correct!

3

Organize by Type

Now try pivoting on the type field to organize by the type of clothing.



Correct!

4

Most Items

Which type of clothing has the most items?

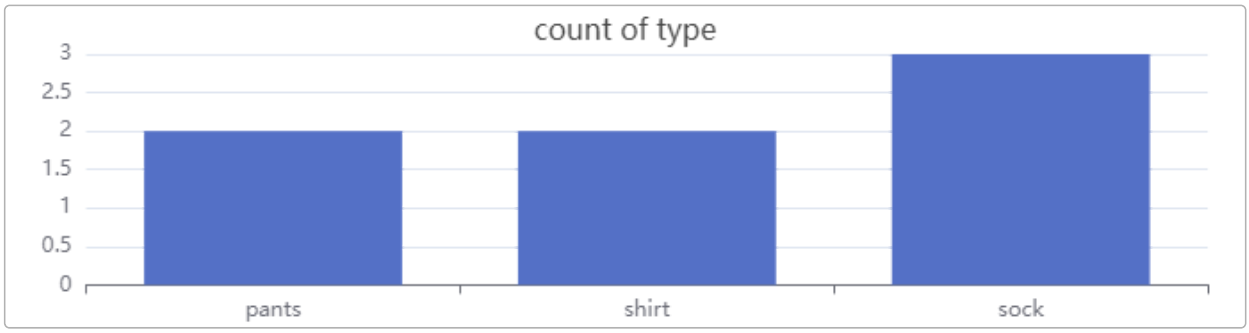
socks

Yes! And why is there always that one extra sock??

5

Build a Chart

After pivoting we can build a chart by specifying a value. Let's count the number of items by dragging the item field to the values drop zone.



Yay, a graph!

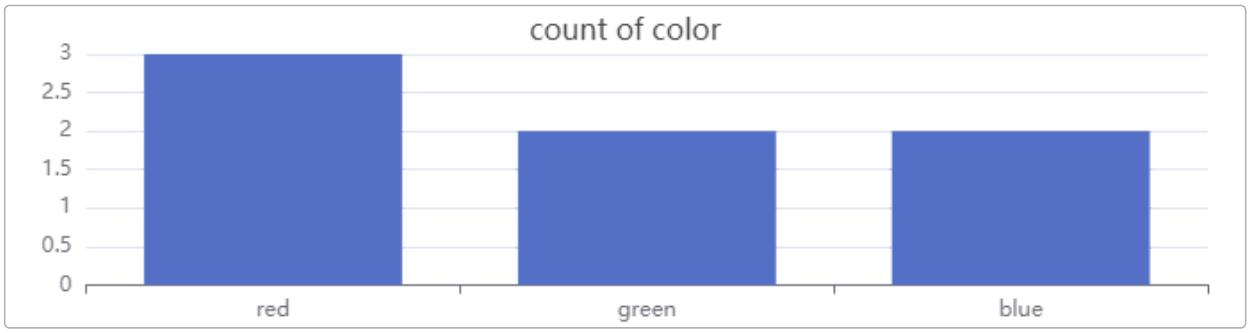
6

Chart the Colors

Now you know how to build **pivot charts**!

Let's make one more chart before we move on to part 2.

Build a chart that **counts** the **number of items** for **each color**.



Correct!
